

Sowlac™ - now available as complementary feedingstuff |

Up until now **Sowlac™** has been categorized as a premixture and thus farmers without a mixing permission and HACCP has been unable to use Sowlac™ at their farms. Therefore, it is of importance to Dumas ApS that Sowlac™ is now offered as a complementary feedingstuff which entails that all farmers can use the product without any restrictions. Sowlac™ is a mixture of selected botanical saponin-containing elements, e.g. fenugreek and organically-bound minerals. In trials, Sowlac™ has proven to facilitate farrowing, increase the number of liveborn piglets with 1 pig per litter, and reduce the mortality rates during nursing. To achieve the best possible effect, the product must be included in the 7-day period prior to farrowing until approx. 10-14 days after farrowing.

For further information on Sowlac™, please contact Dumas ApS via e-mail: dumas@norgroup.dk or tel.: +45 3677 1901.
