

## Natural antioxidants for healthy and homogeneous finishers

Nor-Group companies' natural soluble antioxidants can advantageously be used during periods, when the pigs own immune system is challenged.

**Nor-Guard OV11J** consists of natural antioxidants and can be used for finishers. It is beneficial to use the product four weeks prior to slaughter. During this time there might be challenges with aggression, tail biting etc. **Nor-Guard OV11J** provides natural antioxidants and thus effectively reduces oxidative stress. This is especially beneficial prior to slaughter, as most antibiotics have a retention time of 30 days, which makes it difficult to treat the pigs during this period. *Furthermore, the product provides more uniform pigs, since especially the smallest pigs will achieve a higher daily gain, when **Nor-Guard OV11J** is added to the water.*

**Nor-Guard OV11J** is easy to use. It can be added to the water and does not involve any additives in the feed, which can be a challenge to some feed-manufactures. Normally a stock solution with 150g **Nor-Guard OV11J** added to 10 litres of water is included in the drinking water at 1 % through a Dosatron, Dosmatic or similar.
