Sowlac™

Description

Sowlac is a complementary feed that can be included in sow feeds. The product is made from selected, standardized, milled and dried botanical elements, elements rich in natural antioxidants and materials rich in saponins, including highly bio-available organically bound minerals.

Sowlac is primarily used during a period of 3-7 days before and until 7-10 days after farrowing, but it is beneficial to continue the usage throughout the whole period until weaning.

Sowlac can be used as topdressing or it can be mixed into the feeds.

Specifications

Contents	Selected botanical powders (seaweed, quillaja, quinoa, fenugreek), elements rich in natural antioxidants extracted from grapes and olive leaves in combination with organically bound Fe (10.2 g/kg) and Zn (5 g/kg).
Appearance	Yellowish-freely flowing powder
Stability	Minimum 12 months
Storage	Dry, cool (below 30°C)
Packaging	25 kg paper bags

Suggested inclusion rates

Sows	12-20 grams/sow/day
Period of usage	Primarily one week before farrowing and until two weeks after. Continued usage throughout the period of suckling is suggested.

Note: The feed materials in this product are registered in accordance with Regulation (EC) No 767/2009 and Commission Regulation (EU) No 242/2010.
